

Tips

“Don’t perform food IgE testing without a history consistent with potential IgE-mediated food allergy.”

☐ Food reactions: 2 minutes - 2 hours. Adult onset - very rare.

☐ Testing, done by allergist, is useful if suspicious for an IgE-mediated reaction. 50% False positive

☐ M2-G1: sensitive? specific?

☐ Drug reactions: stop/hold whatever it may be

☐ It’s almost always the antibiotic of the anti epileptic

☐ Sulfa antibiotic \neq Sulfa diuretic

☐ Shellfish allergy \neq Iodine allergy \neq Contrast allergy

☐ Medication technique matters

☐ Check technique (nose spray, inhaler) on all of your patients.
